ABSTRACT:

Improved forms of fluorescent protein with high fluorescence and low toxicity are disclosed.

CROSS-REFERENCE TO RELATED APPLICATIONS

[0001] This application claims priority under 35 U.S.C. .sectn. 119(e) from provisional application 60/264,932 filed Jan. 29, 2001. The contents of this application are incorporated herein by reference.

----- KWIC -----

Summary of Invention Paragraph - BSTX:

[0004] The above documents, each of which is incorporated herein by reference in its entirety, demonstrate that variations in the amino acid sequence of a protein which exhibits fluorescence upon excitation with radiation of shorter wavelength than the fluorescent wavelength provide a range of color choice and intensity. The fluorescent proteins have found wide use both in scientific research and in the production of novelty items, such as toys. Because the

only requirements for fluorescence are irradiation with a suitable wavelength and because the **fluorescence is visible to the naked eye, these proteins** have proved convenient markers and have inspired whimsical applications.

ABSTRACT:

An artificial hollow carvable gourd shaped as a pumpkin, squash, or other fruit or vegetable, having an outer carvable shell, which encases fake "innards and seeds" made of edible candy, and including a prize, contained therein to provide a more realistic gourd container.

RELATED APPLICATIONS

[0001] This application is a continuation-in-part application of the provisional application entitled "Carvable Decorative Gourd", Serial No. 60/1908,429, filed Apr. 19, 2000,

ABSTRACT:

The present invention discloses compositions and methods of using intracellular delivery vehicles for delivery and transfection of DNA, RNA, polypeptides, genes, proteins, drugs and biologically active agents into cells in vitro and in vivo. The vehicle comprises a mixture of a liposome and a polypeptide lacking specificity for cellular receptors. In another embodiment, a method for intracellular delivery of biologically active agents comprising combining a non-receptor-binding protein and a liposome, incubating the mixture for a period of time, adding the biologically active agent, incubating again, and finally, introducing the resulting mixture to the cell. Preferably, the liposome is a cationic liposome. The charge ratio of cationic liposome to DNA can effectively be varied from 2:1 to 1:2. Preferably, the non-receptor-binding protein is the serum albumin of the animal source of the cell to be transfected. This invention is an improvement over, and offers several advantages compared to, previously disclosed cationic liposomal delivery vehicles which utilize receptor ligands.

#### Detailed Description Text - DETX:

These results suggest that a correlation between transfection activity (level of **luciferase** expression) and transfection efficiency (the percentage of cells transfected) can be established in this system. It should be noted that the experiments were not designed to maximize the efficiency of transfection, but to explore the ability to use non-ligand proteins such as HSA, along with various +/-charge ratios, in transfection activity. Therefore, the efficiency of transfection shown herein may not reflect the utility or **novelty** of the invention.

US-CL-CURRENT: 239/33

ABSTRACT:

The instant invention provides for illuminated drinking straws which employ chemiluminescent mixtures as lighting sources. The illuminated drinking straw may be used with either hot or cold beverage such as water, fruit juices, soft drinks, coffees and teas, milk products or alcoholic beverages. A new and exciting drinking straw for amusement purposes is intended.

TITLE: Bioluminescent algae in light bulb shaped viewing device

DATE-ISSUED: September 10, 1996

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Gooch; Van D.	Morris	MN	56267	N/A

APPL-NO: 08/ 269696

DATE FILED: July 1, 1994

US-CL-CURRENT: 434/297; 119/245

ABSTRACT:

The present invention relates to an apparatus for viewing luminescence of algae. The apparatus comprises bioluminescent, dinoflagellate algae, an aqueous solution in which the bioluminescent algae can live, and a translucent light bulb shaped container for holding the bioluminescent algae in the aqueous solution.

8 Claims, 1 Drawing figures

Exemplary Claim Number: 1

Number of Drawing Sheets: 1

----- KWIC -----

Brief Summary Text - BSTX:

The present invention relates generally to an educational and novelty device for viewing bioluminescent algae. In particular, the present invention relates to a light bulb shaped viewing device containing bioluminescent algae.

Detailed Description Text - DETX:

The preferred algae, Pyrocystis, used in the present invention have never been implicated as one of the dinoflagellates involved in shell fish poisoning as described by Karen A. Steidinger & Daniel G. Baden, Toxic Marine Dinoflagellates, in DINOFLAGELLATES 201-61 (David Spector, ed., 1984). If one drank a culture of the dinoflagellates from the device of the present

invention, it is highly unlikely that there would be a sufficiently high concentration of toxins to have a detrimental effect. For purposes of incorporating the bioluminescent algae into a novelty item, no species that was known to be involved in shell fish poisoning is used.

TITLE: Aerial toy with short axis rotational ascent and long axis rotational descent

DATE-ISSUED: April 4, 1995

INVENTOR-INFORMATION:

NAME	CITY	STATE	ZIP CODE	COUNTRY
Savage, Daniel	San Jose	CA	95125	N/A

APPL-NO: 08/ 090712

DATE FILED: July 13, 1993

US-CL-CURRENT: 446/45; 446/36

ABSTRACT:

An aerial toy designed to maintain an aerodynamic profile during ascent by rotating around its shortest axis and having a shape which naturally predicts it to rotate around its longest axis during descent. The body of the invention consists of generally flat, thin, and lightweight, rigid construction (10) with an aerodynamic tapering edge (12). The body has a height that is longer than its width, and one half of the body height has more surface area than the other half.
